More Functions

Enhanced Acoustic Quality
Acoustic fabric-wrapped panels are designed to absorb sound waves, preventing them from reflecting off hard surfaces. This significantly reduces echoes for more precise communication and a quieter atmosphere. Ideal for conference rooms, home theatres, or open office spaces, these panels improve acoustic comfort across various settings.

Aesthetic Flexibility
One key advantage of Fabric-covered acoustic panels is their versatility in design. These panels are designed to integrate smoothly with any existing décor. They come in a broad range of fabric colours and patterns, allowing you to tailor them to suit the current aesthetic design of your space. This customization capability ensures that the acoustic improvements do not compromise the style or feel of your environment.

Adaptable and Versatile
Our acoustic panels are available in a range of shapes and sizes, from standard rectangles to custom designs, offering you the perfect fit for any space. This variety means you can precisely target and improve the acoustics where it matters most. Whether you want to mount them on walls, hang them from ceilings, or even incorporate them into furniture, these panels provide flexible solutions to meet your needs.

Health and Comfort
Too much noise can cause stress, tire you out, and make concentrating hard. Installing acoustic panels allows you to create a quieter, more comfortable space to live or work in. Less noise helps improve focus, boosts productivity, and enhances overall well-being.

POLYESTER FIBRE ACOUSTIC SONOFELT

Sonofelt Polyester Acoustic Felt is designed to provide maximum decorative design flexibility providing a decorative to the extensive range of DecraSound acoustic products.

The Sonofelt acoustic felt when added to acoustic substrates provides both colour and acoustic control and offers the advantage of creating additional pin-able wall space.

Sonofelt polyester felt is manufactured from 75% recycled polyester fibre which is non-toxic, odorless, and has low volatile content. Sonofelt complements the existing Sontext range of fabric-faced and perforated timber acoustic panel products, ensuring our clients have maximum choice of acoustic solutions for interior sound control.

ACOUSTIC OFFICE FURNITURE
Girando DIVIDER

The Girando collection from DECRASOUND includes sound-absorbing panels that help create private spaces while keeping you connected to the surrounding area. These panels are part of a self-standing unit, and each one can be turned independently. Girando collection allows users to adjust the panels to either open or close off their space as needed, giving them control over how much privacy and sound control they want.

The Girando Divider is great for setting up private or semi-private areas without making you feel completely cut off. It helps manage a space's appearance and sounds, making it more comfortable.
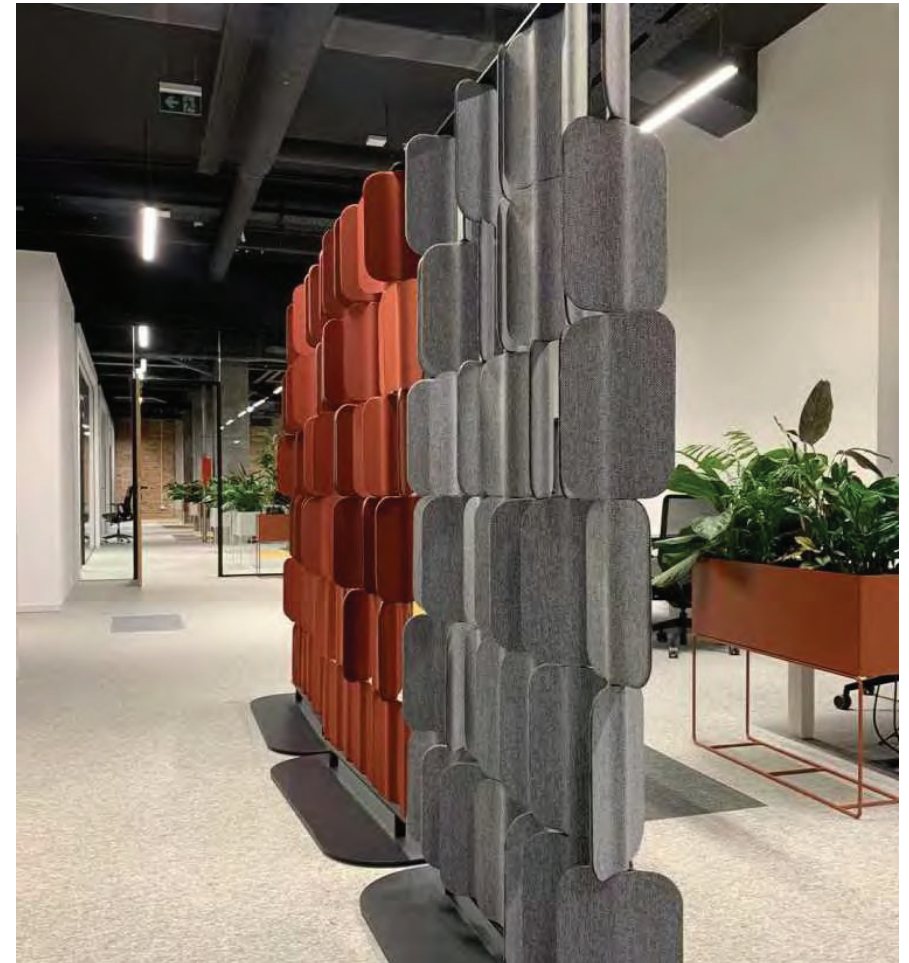

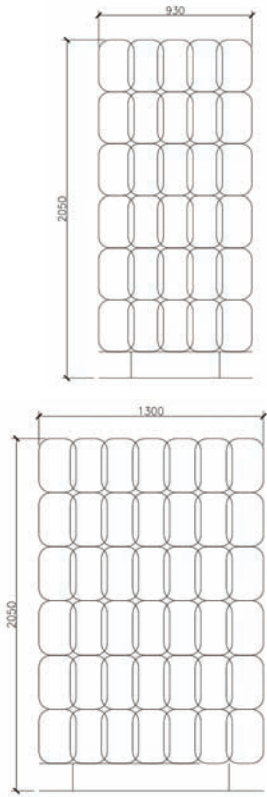

DECRASOUND's Girando dividers are designed to make organizing space straightforward, cost-effective, and attractive. This flexibility means you can quickly define and redefine spaces as required.

ACOUSTIC OFFICE FURNITURE

DECRASOUND free-standing divider for your office space.

Decrasound Free-standing acoustic screens are free-standing, modular room dividers easily arranged into privacy screens, displays, or even temporary walls and rooms. We offer these dividers in various styles and shapes to fit both enclosed and open areas, making them ideal for creating private spaces or visually separating different sections of your office. This flexibility helps you manage your office layout more effectively.

DECRASOUND APPLICATIONS

Sontext® designs acoustic products to meet the growing need for functionality in commercial spaces while reducing noise. As a result, our designers have developed a range of wall, ceiling, and lighting options that provide excellent noise reduction and look great. These products are suitable for offices, schools, and other buildings where comfort from reduced noise levels is important.
Meanwhile, Sontext® remains committed to its core principles of ecological responsibility, design flexibility, and superior acoustic performance in all our products.

DECRAWAVES ACOUSITC PANEL

Decrawave panels help manage sound in your office while adding a creative aesthetic appeal. These sound-absorbing panels feature a simple wave pattern that you can mix and match to create different wall or ceiling patterns. Decrawave is available in various colours and can be installed at various angles, allowing you to customize the look and feel of your office space to fit your needs.

DECRASLAT
ACOUSTIC PANEL

The DECRASLAT acoustic panel improves sound absorption in your space, making it quieter and more comfortable for everyone. This panel also adds a modern look with its various surface options, including melamine and wood veneer, making it a good fit for offices, retail spaces, and restaurants. DECRASLAT will decrease noise levels and minimize echo. It is a practical solution for managing sound in commercial settings.

Product Specifications

Product Type	DECRASLAT
Material	MDF board & PET fiber
Finish	Melamine/HPL/wood veneer
Size	2400*600*22mm/2780*600*22mm/customized
NRC	0.45--0.9

Advantages

- **Effective Noise Reduction**

Sound-absorbing Decrafelt helps reduce noise and lessen annoying echoes in your space, making your office quieter and more comfortable.
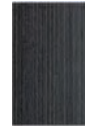

- **Rich in Colour and shape**

Our acoustic panels are available in various wood grain colours and finishes, providing options that complement any commercial decor. This makes it easier to find a style that fits seamlessly into your space.

- **Flame Retardant**

The black acoustic felt meets all international fire standards.

CEILING SYSTEM
DECRASTAR

The 3D DECRASTAR ceiling system allows you to reflect your design preferences while improving communication in the space. The diamond-shaped facets help to scatter sound waves, and the DECRASOUND acoustic panel surface absorbs sound. Decrastar ceiling systems reduce echoes and help control noise, making it easier for everyone to talk and work without disruptive sounds.

CEILING SYSTEM
DECRABAFFLE

Acoustic baffles are panels suspended vertically in spaces with high ceilings or only a roof line. DECRABaffles are available in several arrays and can be manufactured to suit small or larger spaces such as auditoriums. DECRABaffles have been tested for their acoustic performance against all international standards, yielding excellent results in several configurations.
DECRABaffles are compatible with standard connection systems, allowing for quick and easy installation. This system combines appealing design with effective sound management, making it a practical choice for enhancing workplace environments.
